Georgian Elegance Meets Modern Performance with Bygone Symphony Sash Windows Featuring FINEO Glass

THE BACKGROUND

This impressive Georgian-style property was in need of replacement sash windows that could live up to its classic architecture. The homeowner's priority was to maintain the building's authentic heritage character while dramatically improving comfort, insulation, and efficiency.

THE SOLUTION

To achieve the perfect balance of tradition and technology, Bygone Symphony sash windows featuring FINEO vacuum insulating glass were installed. With a U-value of just 1.2, the new windows offer outstanding energy efficiency, while replicating the look of slender single-glazed sashes.

Authentic detailing was central to the project. The windows were specified with a 63mm large bottom rail and a 39mm GRP slim meeting rail, ensuring true Georgian proportions. Full Georgian bars were also chosen, perfectly complementing the property's red-brick façade and stone surrounds.

FINISHING TOUCHES

Attention to detail extended to the finishing touches with:

- Frame vents with concealer – allowing discreet ventilation without disturbing the period sightlines.
- Acorn Satin Chrome furniture – adding a refined yet understated elegance..

THE RESULT

The completed installation has transformed the home, blending seamlessly with the original architecture while delivering the very latest in window performance. The homeowner now enjoys:

- A faithful timber-look finish with authentic Georgian detailing.
- Superb energy efficiency and reduced heating costs.
- A low-maintenance solution built to last.

This project shows how Bygone Symphony with FINEO can enhance even the most characterful of homes — preserving heritage style while delivering modern living comfort.

BYGONE SYMPHONY FEATURING FINEO

Symphony is already widely acknowledged as the most authentic timber alternative sash window on the market. Symphony's unique and beautiful features enhance the product in such a way that many who see it up close believe it is constructed using hardwood timber.

With the addition of FINEO's advanced technology, this amazing product has now taken a giant leap forward, replicating the single glazed appearance of a traditional timber sash window.

FINEO glass is much more than glass technology, it's pure living comfort. This groundbreaking vacuum insulating glass not only delivers amazing energy performance, it also combines exceptionally high thermal insulation with impressive soundproofing, and unseen durability.

FINEO glass insulates to a level, previously only possible with triple glazing, but is lighter and thinner, letting in more natural light.

VACUUM INSULATING GLASS

Why is it special?	What does that mean for you?
Slim, sleek and aesthetically pleasing	Slimline appearance similar to single glazing No unsightly vacuum evacuation point
Outstanding thermal performance	An amazing overall window value of 1.2U
State of the art materials and production techniques	Unprecedented 15 year guarantee
More natural light	At least 15% more daylight coming into your home, when compared with triple glazing
Harnessing more solar energy	Lower energy consumption helps lower emissions
Outstanding acoustic performance	An audible reduction in traffic and ambient noise
